pvd finishes

95 - Polished Nickel PVD

P5 - Matt Gun Metal PVD

P6 - Matt British Gold PVD

P9 - Matt Copper PVD

S1 - Deep Black PVD

Q7 - Pure Brass PVD

Q8 - Raw Metal PVD

Physical Vapor Deposition (PVD) is a technique used to apply a thin-film coating to a surface, creating a hard, durable, and hypoallergenic finish.

Thanks to these qualities, the technique is used in a wide variety of applications, from everyday objects like drill bits and cutlery to jewelry and fashion complements, and even parts for the automotive and aerospace industry.

The process takes place in high-vacuum chambers that are heated to temperatures between 200° and 400° C (400° and 900° F). In these chambers, metal vapors are deposited on electrically charged substrates through a double process of sublimation and condensation.

The Fantini range offers seven options of PVD finishes, each with a refined and contemporary look that makes them suitable for both modern and traditional aesthetics.
